Series 3B
Photoelectric Sensors and Light Scanners
Sensor solutions for nearly **any application** – **Series 3B**.

**Compact, versatile, user-friendly, robust.**

Series 3B from Leuze electronic offers a range of unique features and the largest variety of functions in this performance class of all competitors on the market.

In addition to large operating ranges and improved performance reserves for reliable object detection, even in dusty environments or with high alignment tolerances, technologies such as Active Ambient Light Suppression (A²LS) or “brightVision®” for easy handling and fast commissioning or device models with homogenous pin-point light spot are characteristic of Series 3B.

The diverse range of models make these sensors ideal for a wide variety of applications, for example in mounting and handling technologies, in the conveyance of extremely small containers as well as in printing and packaging technologies.
The most important **advantages** at a glance.

**User friendly**
- 360° visibility of the indicator diodes
- Simple, one-point teaching
- Robust teach button, can be operated manually or using a tool
- Teach devices also with line teaching
- Protection against manipulation by means of a lockable button

**Reliable**
- Maximum performance reserve
- High extraneous light protection through A2LS
- Energy savings through lower power consumption
- Protection classes IP 67

**Versatile**
- The following functions are available:
  - Retro-reflective photoelectric sensor and light scanner for all standard applications
  - Light scanner with special light-spot profiles (rectangular, small) and background suppression
  - Light scanner with V-optics and background suppression
  - Sensors with autocollimation principle
  - Retro-reflective photoelectric sensors and light scanners with laser light and collimated light beam propagation
  - Energetic light scanner also with fading (background suppression)
  - Throughbeam photoelectric sensors with small light beam propagation and a high range

**Robust**
- Integrated attachment sleeve made of metal to protect against housing breakage
- M8 metal plug
- Reinforced in the connection area

**Flexible**
- Push-pull outputs for NPN or PNP controls
- All common connections:
  - M8 connector
  - 2000 mm cable
  - Cable with M8 or M12 connector
- Slot for flexible mounting
Throughbeam photoelectric sensors

- High performance reserve
- Transmitter with small, homogeneous light spot by means of pin-point LED
- Transmitter optionally with activation input
- Receiver optionally with warning output
- Warning output for increased availability

For **reliable** object detection independent of the environmental conditions.

**Retro-reflective photoelectric sensors**

Reliable function with small, misadjusted reflectors and heavy soiling.

The specialist for positioning tasks.

- High performance reserve
- Reliable object detection with small, misadjusted reflectors, large operating range or heavy soiling
- High performance reserve
- Especially designed for positioning with high accuracy
- Short range with foil reflectors
- Autocollimation principle for use at zero distance
- Easy adjustment via lockable teach button or teach input
Retro-reflective photoelectric sensors

The world’s **first laser autocollimator** in this size.

![Image]

- Reliable detection of objects with a diameter ≥ 0.1 mm
- Object detection through slits, holes and gaps with extremely small dimensions
- Especially designed for the detection of fast events and small parts

- Especially designed for the detection of transparent media such as glass, PET and foils thinner than 20 µm
- Easy adjustment via lockable teach button or teach input
- Particularly suited for highly transparent PET and glass bottles

![Image]

**Trigger photoelectric sensor**

**Bottle detection**
• Retro-reflective photoelectric sensor with un-polarized red light, making it especially suited to switching on a polished metal plate serving as a reflector
• RKR 3B/22D.01 and /44D.01: increased switching frequency for high precision
• RKR 3B/66.11: extra large light spot for high angle tolerance

Detection of cap seals

Switching on glossy surfaces.

Detection of cap seals

Switching on metallic backgrounds
Diffuse reflection scanners

**energetic**

- Energetic diffuse reflection light scanner with scanning range adjustment
- High switching frequency for detection of fast events

For use in standard applications with high ranges.

<table>
<thead>
<tr>
<th>BrightVision®</th>
<th>11 × 11 mm @ 200 mm; 27 × 27 mm @ 500 mm</th>

**diffuse reflection scanners with fading**

- Fading – no object detection in background
- Potentiometer for scanning range adjustment
- High switching frequency for detection of fast events

For detection of objects on a transport system.

<table>

**RTR 3B/66**
- Scanning range limit: 0 – 750 mm
- Switching frequency: 1,000 Hz
- Functions: Standard

**RTR 3B/6.7**
- Scanning range limit: 0 – 450 mm
- Switching frequency: 1,000 Hz
- Functions: Standard

**RTFR 3B/66**
- Scanning range limit: 0 – 450 mm
- Switching frequency: 1,000 Hz
- Functions: Standard

**RTFR 3B/6.7**
- Scanning range limit: 0 – 450 mm
- Switching frequency: 1,000 Hz
- Functions: Standard
Diffuse reflection light scanner with background suppression

- Very good bw/wb behavior and reliable switching nearly independent of the object and background properties
- Exact scanning range adjustment through 8-turn potentiometer
- Also available with infrared light (HRT 3B)

For use in **standard applications.**

Object detection in wide light beam

Small part detection

- Especially designed for the detection of objects with openings, holes and grooves, e.g. circuit boards
- Also for transparent foil and bottles
- HRTR 3B-L: Especially designed for the use of fluorescent lights with HF-ballast

- Especially designed for the detection of fast events and small parts
- For applications with high demands on positioning and reproducibility
- Standard design in laser class 1
- Extendable scanning area with very good bw/wb behavior in laser class 2
For the detection of **glossy objects** with background suppression.

**BrightVision®**

- Transmitter inclined under 11° in the direction of the receiver

- With V-optics:
  - Especially designed for the detection of flat, reflective or highly glossy surfaces
  - Also for transparent objects

- KRTW 3B: contrast scanner with white light and YellowBoost, especially designed for detecting more than one contrast
- KRTM 3B: contrast scanner with RGB (red, green, blue) light, especially designed for detecting one contrast
- KRTL 3B: contrast scanner with laser-generated red light, especially designed for large scanning distances (40 – 80 mm)
- All devices optionally with IO-Link interface

**Reliably detect contrasts in small housing.**

- KRTW 3B: 1.5 x 4 mm @ 14.5 mm
- KRTM 3B: 0.5 x 1 mm @ 60 mm
